Summary

Software Engineer with hands-on experience in developing full-stack web applications and AI-powered software solutions using the MERN Stack. Proficient in Java, React.js, Node.js, Express.js, MongoDB, REST APIs, Docker, Kubernetes, and modern software development practices. Passionate about building scalable applications and continuously learning emerging technologies.

EDUCATION

Sri Shakthi Institute of Engineering and Technology **2022 – 2026**
B.E. Electronics and Communication Engineering, CGPA: 8.25 *Coimbatore, India*

WORK EXPERIENCE

BI3 Technologies **Coimbatore, India**
Software Engineering Intern *March 2025 – August 2025*

- Contributed to the development and enhancement of frontend and backend features for the team's application using **React.js**, **JavaScript**, **Node.js**, and **Express.js**.
- Developed responsive and reusable **React.js** UI components using **HTML** and **CSS** to improve application usability and user experience.
- Assisted in developing and integrating **RESTful APIs** using **Node.js** and **Express.js**, and implemented **CRUD operations** for application data management.
- Used **Git** and **GitHub** for version control, code management, and collaborative development while working with team members to debug issues, enhance existing features, and deliver assigned tasks.

TECHNICAL SKILLS

Programming Languages: Java, C, SQL
Frontend: HTML5, CSS3, JavaScript, React.js, Bootstrap
Backend: Node.js, Express.js, REST APIs, Socket.IO
Databases: MongoDB, MySQL
Cloud & DevOps: Docker, Kubernetes
Tools: Git, GitHub, VS Code, Linux
Core Concepts: REST APIs, JWT Authentication, MVC Architecture, Microservices, Object-Oriented Programming (OOP), Data Structures & Algorithms

PROJECTS

Real-Time MERN Chat Application | MongoDB, Express.js, React.js, Node.js, Socket.io, JWT | GitHub

- Built a real-time **MERN** chat application supporting **100+ concurrent connections** using **Socket.io**.
- Designed **REST APIs** and optimized request handling, improving response time by approximately **15%**.
- Implemented secure user authentication using **JWT** and **bcrypt**.
- Applied **MVC Architecture** to build a modular, scalable, and maintainable backend system.

Microservices-Based Task Management System | Node.js, Docker, RabbitMQ, MongoDB | GitHub

- Built scalable **microservices architecture** using **Node.js** and **Docker**, enabling independent service deployment.
- Implemented **RabbitMQ** for asynchronous communication using **event-driven architecture**.
- Improved scalability and deployment consistency through **Docker** containerization.
- Developed **REST APIs** and integrated **MongoDB** for efficient distributed data management.

ACHIEVEMENTS

- Solved 200+ problems on LeetCode focused on Data Structures and Algorithms.
- Built and deployed **full-stack applications** using the MERN Stack, implementing RESTful APIs, JWT authentication, and responsive user interfaces.
- Designed a **microservices-based application** using Docker and RabbitMQ, gaining practical experience with scalable backend architecture and event-driven communication.
- Continuously learning cloud and DevOps technologies, including **AWS, Docker, Kubernetes, and CI/CD** practices.

CODING PROFILES

- **LeetCode:** leetcode.com/u/Chandruprasath/
